

DOCDEADBOLT™ - A SECURE EMAIL AND DOCUMENT DELIVERY SOLUTION

DocDeadbolt™ is a secure email and document delivery solution that allows your organization to share and track private messages and documents with business partners, clients and co-workers in a secure, web-based environment. Join leading financial institutions and healthcare organizations that have made **DocDeadbolt™** an integral part of their federal and HIPAA compliance plan.

In the past decade, electronic messaging has revolutionized business communication, making it more efficient and cost-effective than ever before. But, as electronic messaging has become the primary communication tool for businesses worldwide, many organizations are struggling to balance its obvious benefits with the privacy and security risks that electronic messaging can pose. An increasing number of businesses have experienced financial and credibility losses when critical data has been destroyed due to a network or virus attack, or when sensitive messages and attachments have been lost or intercepted by unauthorized parties. The cost of such security breaches can be particularly high for financial, healthcare and insurance companies due to the sensitive and confidential nature of their email communications and federal and HIPAA compliance regulations.

How Does DocDeadbolt™ Work?

DocDeadbolt™ is as simple to use as it is secure. The sender logs in to a secure, web-based account, composes an eMail message, determines a pass code, attaches a document and clicks a button to send the message to the recipient. In order to view the message and attachment, the recipient must enter the proper pass code. An administrative console allows the sender to track all aspects of document transmission including receipt, download, deletion and IP address of the recipient's document. The sender can also delete a document at anytime, set-up automatic expiration rules, and lock the message making it only available to the first IP access point and preventing additional parties from viewing the message.

DocDeadbolt™ is secure using industry-standard and recognized Verisign™ SSL encryption certificates and is built on the secure Sun Solaris 9 UNIX operating system.
