Eliminate over 95% of SPAM before it reaches your network when you upgrade your hosted mailboxes to include GMSI's Advanced SPAM and Virus Filtering solution! Upgrade today and take advantage of FREE, instant set-up.

- o Eliminates 95% or more of SPAM
- o Online Message Center provides user access to quarantined messages
- o Customizable sensitivity level settings
- o FREE, instant set-up
- o Only \$2.50 per month/mailbox

How does it work?

GMSI's Advanced SPAM & Virus Filtering allows you to virtually eliminate SPAM and virus intrusions to your network. The service puts each message to-the-test through an advanced filtering process that has been proven to detect virtually all SPAM and virus-infected messages. Legitimate messages race through the filter and are delivered within seconds to the user. Suspicious messages are automatically quarantined in an easy-to-use "Message Center" where the user can decide which messages to keep and to eliminate. The filters are easily customizable providing a range of aggression level settings and the ability to permanently block or accept messages from specific senders.

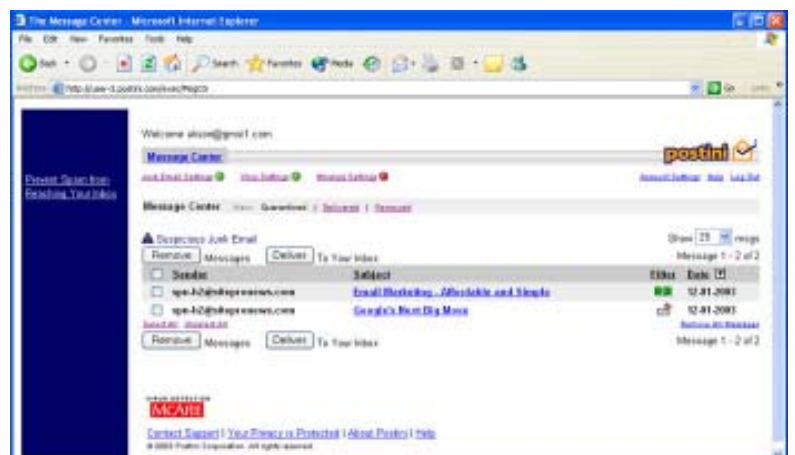

How can I get started?

Your hosted mailboxes can be upgraded to include Advanced SPAM and Virus Filtering instantly! Set-up requires a quick phone call to a GMSI account representative and a simple change to your DNS MX record. No software or hardware is required.
